[CLAIMS]

- 1. A method for reproducing an original image on an image carrier comprising the steps of :
- generating a conjoined first and second sub-image, each representative for a portion of said original image;
 - defining an overlap region as a region where both sub-images give a contribution to the integral optical density of the image carrier;
- establishing for each sub-image a peripheral edge in said overlap region;
 - increasing said contribution by said first sub-image from said peripheral edge of said first sub-image to said peripheral edge of said second sub-image.

- 2. The method according to claim 1, comprising the steps of :
 - dividing said overlap region in a partition of microdots ;
 - assigning to at least one microdot an intermediate microscopic density substantially different from a minimum and maximum microscopic density of said microdots.
- 3. The method according to claim 2, wherein the step of increasing said contribution comprises increasing the microscopic density of said microdots by density steps being smaller than half the
- 25. difference between said maximum and minimum microscopic difference.
 - 4. The method according to claim 1, comprising the steps of :
 - halftoning said first sub-image by a first frequencymodulated halftoning method; and,
 - halftoning said second sub-image by a second frequencymodulated halftoning method, substantially non-correlated to said first frequency-modulated halftoning method.
- 35 5. The method according to claim 4 comprising the steps of :
 - generating for a zone in said overlap region by said first subimage a first per cent of blank microdots;

- generating for said zone by said second sub-image a second per cent of blank microdots, said second per cent being equal to said first per cent.
- 5 6. An imaging system for reproducing an original image by an imaging device on an image carrier comprising :
 - means for generating a conjoined first and second sub-image, each representative for a portion of said original image;
 - means for defining an overlap region as a region where both sub-images give a contribution to the integral optical density of the image carrier;

10

- means for establishing for each sub-image a peripheral edge in said overlap region;
- means for increasing said contribution by said first sub-image
 from said peripheral edge of said first sub-image
 to said peripheral edge of said second sub-image.
